BRICKLINE GREENWAY CONNECTS ST. LOUIS THROUGH MODERN CONCRETE INFRASTRUCTURE

The Brickline Greenway is transforming the way St. Louis connects by creating accessible pathways, gathering spaces, and safer streets designed to serve the region for generations. Spanning miles throughout the city, the project utilizes Concrete infrastructure to deliver the durability, longevity, and performance needed for heavy daily use while supporting a more connected and walkable St. Louis. With multiple segments already under construction and additional phases moving forward, the full Brickline Greenway project is expected to continue progressing toward completion through 2030.

What makes this project stand out is the way it combines modern infrastructure with the character of St. Louis itself. Inspired by the city's historic brick architecture, the Brickline Greenway blends timeless design with the strength and efficiency of Concrete construction. The result is a corridor that not only improves mobility and accessibility, but also creates spaces that feel welcoming, lasting, and uniquely St. Louis.
