Tarlton Corporation Uses Modern Concrete Construction to Enhance Historic Architecture

This ambitious renovation and expansion of the **BOBB/Goodwill Building** required both technical precision and deep respect for the existing historic structure. **Tarlton's** concrete team delivered a complex, 65,000-square-foot addition that seamlessly integrates with the original building while preparing it for future tenant use.

Above ground, the newly constructed superstructure consists of five levels of conventionally reinforced 16-inch concrete decks, along with columns and shear walls that form the backbone of the addition. A critical component of the design is the three-bank elevator shaft, which connects the new and existing structures on every level—ensuring full integration and functionality.

The result is a structurally sophisticated and forward-looking space that supports innovation, growth, and the continued evolution of one of St. Louis' most dynamic districts.
