

SAME ASSET MORE VALUE™ CONCRETE

JUNE 2026

Most people don't think about concrete until there's a pothole, a traffic delay, or a bridge closure. Yet across the St. Louis region, thousands of workers are quietly building and rebuilding the infrastructure that keeps our communities moving. From municipal pavement programs and bridge rehabilitations to freight corridors and flood protection systems, 2026 marks one of the most significant periods of infrastructure investment our region has seen in decades. While the projects themselves vary in size and scope, they all share a common purpose: creating something that will serve future generations long after today's crews have packed up their tools.

The story of St. Louis has always been tied to bold infrastructure. More than 150 years ago, engineers pushed the limits of what was possible when they built the Eads Bridge, forever changing the future of the city. Today's concrete professionals are carrying that same legacy forward. Every pavement replacement, bridge deck, sidewalk, and foundation represents an investment

in the future of our region. Years from now, most people won't remember who poured the concrete or finished the surface, but they'll drive on it, walk across it, and depend on it every day. That's the unique power of concrete... it becomes part of the community itself, supporting the people and places that make St. Louis strong.
